

1. INTRODUCTION

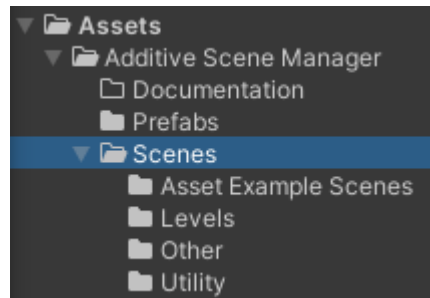

We work on it different scenes most of time when create games. Same time, We want to get quickly specific prefabs, gameObject etc. when we needed. At this point, this asset will make our job much easier. By adding this asset to project. You can get...

- Switch quickly between scenes in the same folder
- Easily add scenes in different folder
- In runtime, Jumping between levels in a continuous loop (Actually, this asset is editor tool. But use to jump between levels simply)

2. HOW TO USE

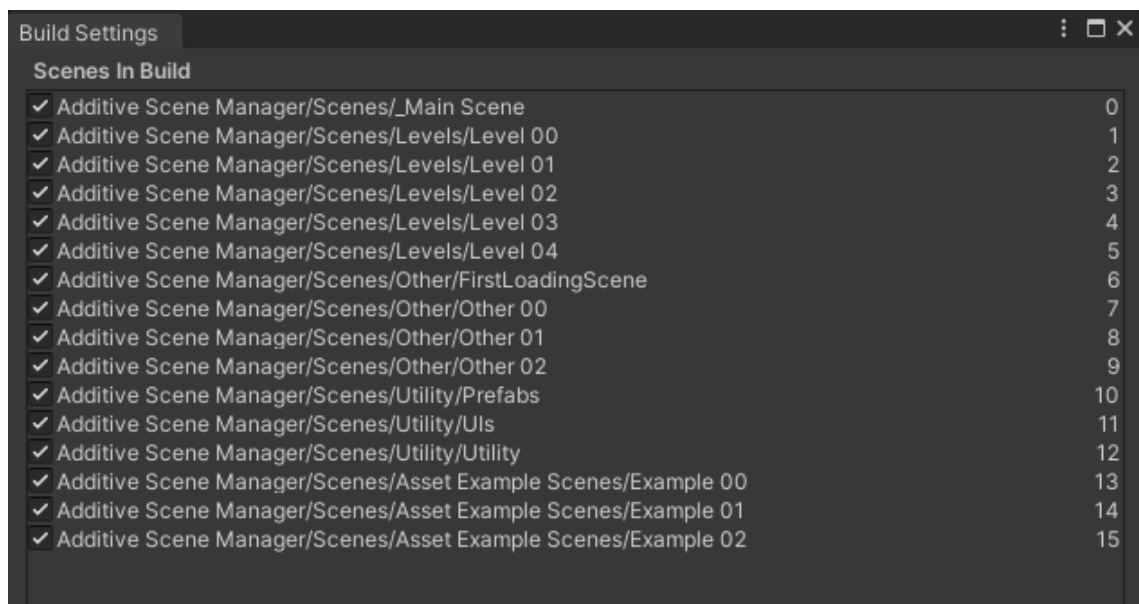

LevelManager(ScriptableObject) inspector panel view

Folders of our scenes

It is not enough to collect our scenes under a certain folder to use this tool. Our scenes must assign to Editor Build Settings. So that you can reorder our scenes and remove specific ones.

Our scenes of Editor Build Setting

2.1. ReInitialize Button:

It is a button which need to be pressed when added scene, changed name, appear error in console, changed of editorBuildSettings stuff etc.

2.2. Remove All Additive Scene Button:

Remove all additive scene in hierarchy

2.3. "R" Button:

Remove additive scene (scene which belongs to the slider) in hierarchy

2.4. SceneInfo -> Name

For information on which slider belongs to which scene. It is also used it for the *Playerprefs* key.

2.5. SceneInfo -> FolderPath

The folder path where the scenes are located.

2.6. Shortcuts (Runtime)

"P: Pause | N: Jump next level | R: Restart"

2.7. Shortcuts (Editor)
